

Synthetic RAG Demo Knowledge Base

Original sample content for testing retrieval-augmented generation

Document ID	RAG-DEMO-001
Version	1.0
Status	Synthetic test data

Purpose

This document is intentionally small and self-contained. It gives the RAG examples a safe knowledge source with facts that can be retrieved by topic, keyword, or identifier. The content is fictional and has no connection to any commercial game, publisher, or external publication.

1. The Lantern District

The Lantern District is a neighborhood built around the old North Canal. Its community center is called Harbor House, and its weekly market takes place every Saturday morning. The district uses blue wayfinding signs with a small lantern symbol.

Key facts

- Harbor House is the community center.
- The weekly market runs on Saturday mornings.
- The North Canal borders the district on its eastern side.
- Blue signs identify official neighborhood routes.

2. The Aster Battery

The Aster Battery is a fictional rechargeable power unit designed for field equipment. It has a capacity of 480 watt-hours, weighs 6.2 kilograms, and is rated for operation between -10 and 45 degrees Celsius. A full recharge takes approximately three hours with the standard charger.

The battery includes a green status ring. A steady green ring means the unit is ready. A pulsing amber ring means charging is in progress. A red ring means the battery should be disconnected and inspected.

3. Meadowline Transit

Meadowline Transit operates three routes: Route 1 connects the railway station to Harbor House, Route 2 connects the library to the west gardens, and Route 3 connects the market square to the science campus. Buses run every 20 minutes during the daytime schedule.

Route 2 is the only route that stops at the Glasshouse Gate. Route 1 is the most direct route to the North Canal. The final evening departure for all three routes is at 22:40.

4. The Blue Finch Archive

The Blue Finch Archive stores field notes about local plants. Records are organized by specimen code, collection date, and habitat. The archive's reference room is open Tuesday through Friday from 09:00 to 16:00, and the digital catalog is updated every Monday.

Specimen BF-17 is a silver-leaf herb found near dry stone walls. Specimen BF-22 is a night-blooming flower found beside shallow ponds. Neither specimen should be confused with the red-stem fern, which is cataloged under code BF-31.

5. Retrieval Prompts

Try asking the RAG application questions such as: Which route reaches the Glasshouse Gate? What does a pulsing amber battery ring mean? When is the Lantern District market held? What is specimen BF-22? These questions are designed to test both direct fact retrieval and multi-sentence context.
